

**FLYWHEEL ASSEMBLY**  
**ABSTRACT OF THE DISCLOSURE**

A flywheel damper 11 to which torque is transmitted from a crankshaft 2 of an engine, includes a second flywheel assembly 5, a damper mechanism 6, and a support plate 39. The damper mechanism 6 elastically connects the second flywheel assembly to the crankshaft 2 in a rotating direction. The support plate 39 is attached to the crankshaft 2 and supports the second flywheel assembly 5 on the crankshaft 2. The support plate 39 has an axial extension 39f attachable to and detachable from the second flywheel assembly 5 in the axial direction.
